## Boost Cybersecurity with Managed Services

Did you know your organization could be subject to data breach notification laws and possible fines for data breaches and losing sensitive client data? [The exact laws and regulations do vary by state and industry](#), among other factors. But the fact remains that poor cybersecurity can lead to grave consequences, either financial or for your reputation.

Common sense advice is that any organization should establish and maintain a plan for managing cybersecurity risks. This security plan should be informed by applicable laws and regulations.

Are you concerned about the state of your security and your ability to protect your organization's sensitive information? **Managed IT services can help.** Managed IT services are the constant remote monitoring of your IT network and technology services, such as:

## 7 Dos and Don'ts of Secure Online Tax Filing

used with permission from Norton by Symantec  
by Nadia Kovacs

Online fraud is one of the fastest growing crimes of our time. The ability to be anonymous, and the fact that it can be performed anywhere in the world makes it very difficult, if not impossible, for law enforcement to curb it.

As online fraud continues to grow, an unfortunate number of American citizens might face this scenario: It's tax season, and you are getting your paperwork together in order to file your taxes. During the process you receive an email from the IRS stating "Congratulations on filing your tax return."

## Stick with Security: Secure remote access to your network

used with permission from FTC.gov  
by Thomas B. Pahl, Acting Director, FTC Bureau of Consumer Protection

Ask a business person where their office is located and the likely answer is "everywhere." They're working from home, staying in the loop while traveling, and catching up on email between sales calls. For productivity's sake, many companies give their employees — and perhaps clients or service providers — remote access to their networks. Are you taking steps to ensure those outside entryways into your systems are sensibly defended?

"Invisible jet lag."

## Monthly Quote

"To be yourself in a world that is constantly trying to make you something else is the greatest accomplishment."

-- **Ralph Waldo Emerson**

## Business Continuity Tip

### Non-Technical Security Practices on the Go

Strong security isn't just about the cyber domain of strong passwords and blocking malware. You also safeguard sensitive information with physical security and cautious behavior. Here are some non-technical security tips:
