HPE GreenLake Flex Capacity
Go hybrid and get the best of both worlds

Why choose between on-premise and on-demand IT when you can have both?

Hybrid IT is within reach with HPE GreenLake Flex Capacity

Capacity planning is difficult to get right. Many businesses overprovision IT in an effort to play it safe; others underestimate their future needs and find themselves in a bind. Both approaches require significant capital outlays and have long procurement cycles, limiting IT agility and restricting business operations. But there is an alternative: the public cloud—a fundamentally different model that changes IT from a capital- to consumption-based expense, so you can scale rapidly without predicting capacity. And it offloads much of the “undifferentiated heavy lifting” that comes with operating a data center.

MyHeritage data breach exposes info of more than 92 million users

used with permission from Norton by Symantec

If you use MyHeritage for testing your DNA and tracking your ancestry, you may need to change your password. That's the company's guidance following a data breach that exposed email addresses and encrypted passwords for more than 92 million users.

Spectre Next Generation: What it is and how to protect yourself

used with permission from Norton by Symantec

Spectre Next Generation — reportedly a new set of vulnerabilities in modern computer processors — could put your data at risk.

Heise, a German online computer publication, reported on the security issue in March 2018. It said eight new vulnerabilities had been identified.
