What NOT to do after a data breach

used with permission from HP Tech@Work

Breathe deep, reduce anxiety, and avoid these 9 things

It's an IT department's worst nightmare: Your business has been hacked by a third party that has accessed your sensitive, confidential data. And often, by the time you discover it, a breach is well underway.

US companies take an average of 221 days to detect a breach, according to a 2018 study. So what do you do? Well, it turns out that knowing what not to do is just as important—because, even with the best of intentions, your team could accidentally make the situation much worse. Here's what to avoid in the event of a cyberattack.

Vulnerabilities, data breaches, and phishing remain at the forefront of cyber security. [Connect With a HUB Tech Cyber Security Specialist](#) today to discuss the options that are available to protect your school district, business, or municipality.

TECH TIPS

Ways to Protect Your Business from a Cyber Attack

Every month, HUB Tech will provide you with a helpful security tip or statistic to keep you in-the-know.

Tech Tip #1: Spam Email.

Secure your email. Most attacks originate in your email. We'll help you choose a solution designed to reduce spam and your exposure to attacks on your staff via email.

Can you strengthen your weakest link?

used with permission from HP Tech@Work

The answer may surprise you

There's an adage in IT circles that people — both you and your employees — tend to be the weakest link in the cybersecurity chain. But that's not entirely true.

Attacks actually come from a variety of places, with 72 percent perpetrated by outsiders, 27 percent involving internal actors, 2 percent involved partners and 2 percent featuring multiple parties, according to the [Verizon 2018 Data Breach Investigations Report \(DBIR\)](#).*

Fend off cybercriminals with better business security practices

used with permission from Tektonika (HP)
by Karen Gilleland

"Gimme the dough—or you'll never see your files again!" In this scenario, the thug in the mask is ransomware, and it's

only one of the ways cybercriminals attack businesses—which are often left vulnerable due to poor business security or cybersecurity practices. Alongside the devastating effects cyber attacks can have on individuals, cybercriminals are sucking billions of dollars out of the economy, and you do not want your business in that position.

Business Continuity Tip

Phishing Identification Checklist

Phishing attempts work when they gain your trust and make you act emotionally. For example, if an email looks like it comes from your bank, you are likely to recognize it and trust it.
